BSA silver star .177 Air Rifles

£ 699.99

Description

It's no secret that all BSA's are renowned for their supreme accuracy and the Silver Star sporting TARGET RIFLE delivers nothing less (.177) The Silver Star PCP has been designed specifically for competition use and incorporates a host of features usually reserved for much higher priced guns. The incredibly accurate BSA cold hammer forged barrel adorns an attractive ambidextrous beech stock with laser chequering to the forend and pistol grip. Maximum ergonomics are provided by the height adjustable cheek piece and multi adjustable butt pad which allows for individual modification both vertically and to the length of pull. Cocking the rifle is achieved almost effortlessly by pulling the new BSA "T" handle bolt back and reinserting into the breach. Additional features include a two stage adjustable match trigger, on board pressure gauge and quick fill port. The Silver Star's most unique feature compared with other BSA's models to date is its detachable air cylinder which is pre-set to one of two levels. The cylinder can be supplied in either 6ftlbs or 12ftlbs allowing it to be used for both short and longer range competition. A second cylinder can be ordered as an additional accessory enabling the shooter to have both power levels available for the same gun. The cylinder can be easily removed for replacement with a different one although this is not required for re-filling as charging can be completed via the quick fill port. 6ftlb versions come complete with high quality dioptre sights whilst rifles ordered in 12ftlb configuration are supplied without the dioptre unit to allow a telescopic sight to be mounted. We're confident you'll agree the Silver Star is a stand out competitor that can improve your performance without damaging your budget! Adjustable length of pull from 12" to 15.5" Height adjustable comb piece Two stage adjustable match trigger Ambidextrous stock Cold hammer forged BSA barrel Removable power configurable cylinder
